Server won't boot

Sample rates do not match

When trying to boot the server with `s.boot;` you may get the message

```
input and output sample rates do not match. 44100 != 48000

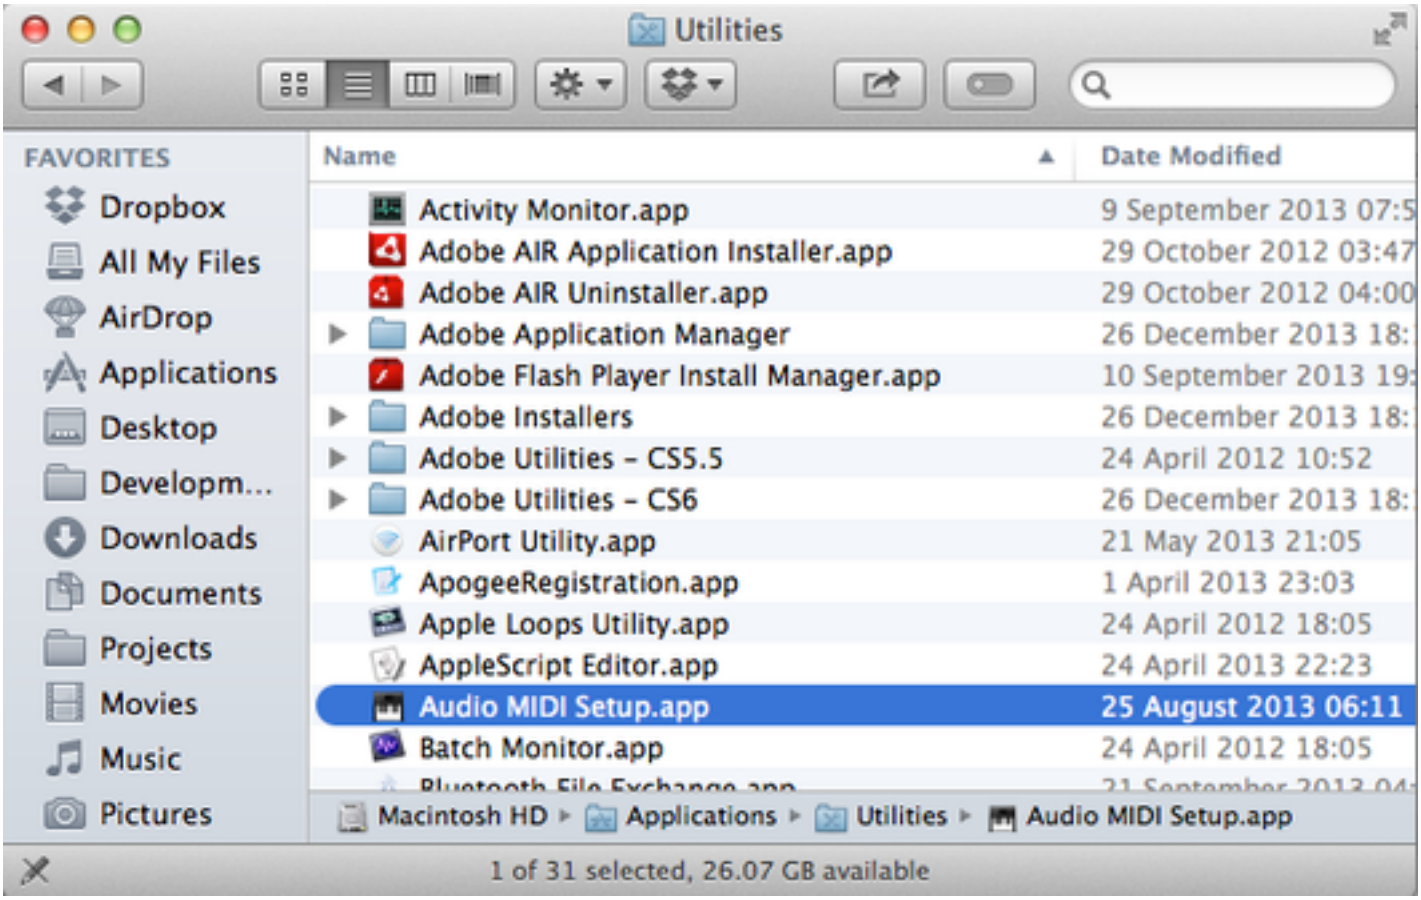
could not initialize audio.

RESULT = 1

ERROR: server failed to start
```

Audio MIDI Setup

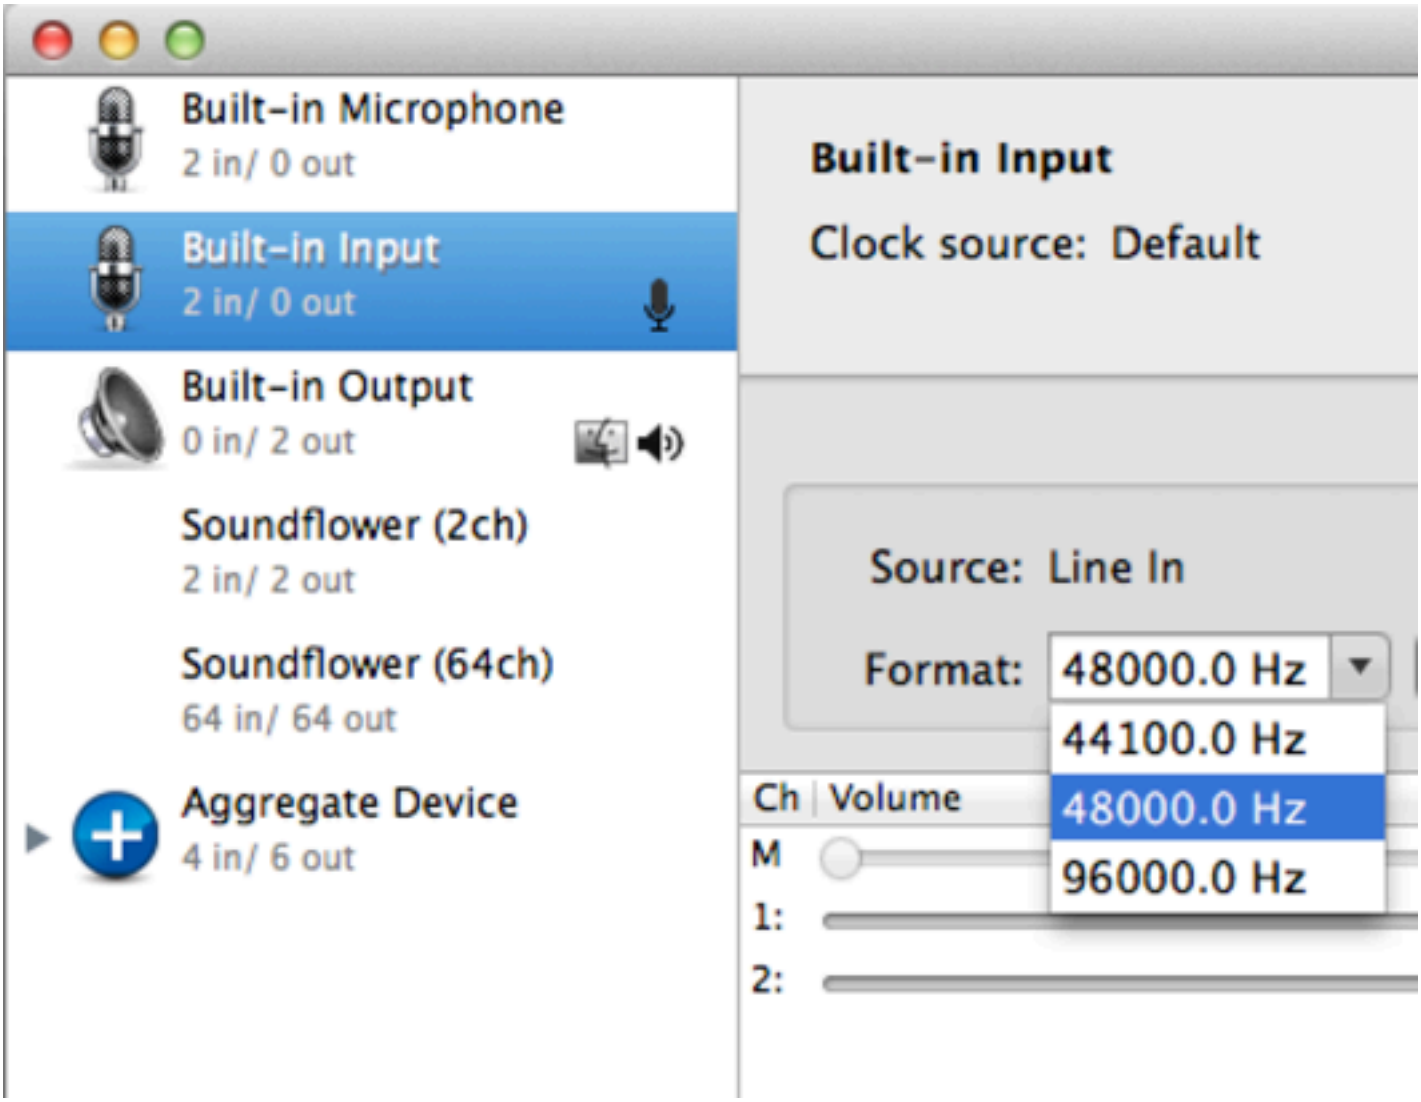
To solve this open the Application `Audio MIDI Setup` which is in `/Applications/Utilities`



Matching Sample Rates

Now set the sample rate for each device with an icon next to it `48000.0 Hz`.

If it refuses and keeps switching back to `44100.0 Hz` then set them all to that, it's just important that they match.



Still won't boot

Run

```
Server.killAll;

s.boot;
```

STILL won't boot

Quit and re-open SuperCollider
